EDUCATION

Boston College, Morissey College of Arts and Science

Chestnut Hill, MA

Bachelors Degree in Computer Science

May 2025

- **Dean's List:** First Honors (Multiple Semesters)
- **Relevant Coursework:** Data Structures, Algorithms, Software Engineering, Computer Systems, Web Development, Data Science

WORK EXPERIENCE

Allied Solutions

Carmel, IN

Software Engineer (Junior) | C#, .NET, REST API, AWS, Datadog, Git, MSSQL, Postman, Agile

May 2025 – Present

- Designed and developed a secure, scalable cloud-native REST API using C# and .NET on AWS, enabling digital verification of vehicle and mortgage insurance policies and processing 50,000+ requests per week.
- Integrated AWS services and implemented CloudWatch and Datadog monitoring, improving system observability, logging, and incident response.
- Modernized a legacy .NET application by refactoring the codebase to improve performance, maintainability, and scalability, and implemented a CI/CD pipeline using Harness with automated testing and deployment.
- Collaborated within an Agile environment, participating in sprint planning, code reviews, and backlog refinements.

Boston College ITS

Chestnut Hill, MA

Student Programmer | Python, Django, PostgreSQL, Flask, Docker, Git

August 2024 – May 2025

- Utilized Python, Django, and PostgreSQL to support software deployment, ensuring robust data management and validation processes in line with institutional standards.
- Implemented two major software solutions aligned with Boston College's technical framework, achieving compliance with authentication protocols while optimizing reliability through rigorous testing procedures.
- Ensured software compliance with Boston College standards by redesigning authentication processes to align with BC's Single Sign-On, enhancing user experience and optimizing security measures for over 12,000 users.

Allied Solutions

Carmel, IN

SDET Intern | JavaScript, Cypress, UiPath, Git

May 2024 – August 2024

- Responsible for designing, executing, and reviewing automated test plans across 5+ code bases using UiPath and Cypress with JavaScript while becoming familiarized with Agile methodologies in a fast-paced SaaS environment.
- Created documentation for new processes and procedures, including a static code reviewer that was implemented across 50+ company repositories.

PERSONAL PROJECTS

EagleVision | Python, Django, PostgreSQL, APScheduler, Docker, Bootstrap 5

- Full stack data-driven application that allows students to monitor classes during the class registration period, register for course waitlists, and receive email notifications when spots in those classes become available.
- Adopted by the Boston College IT department as an official Boston College tool to be utilized by 12,000+ students and faculty members.

Crystal Structure Prediction from Material Properties | Python, NumPy, scikit-learn, pandas, Matplotlib

- Developed a predictive model for crystal lattice parameters and atomic basis using material properties such as band structure, density of states, heat capacity, and hardness, based on data from The Materials Project.
- Compared predictive outcomes with results from Density Functional Theory (DFT) to evaluate the model's alignment with theoretical simulations.

SKILLS

- **Languages:** C#, Python, JavaScript, Java, SQL
- **Frameworks & Tools:** .NET, Django, Flask, Git, Docker, Postman
- **Cloud & DevOps:** AWS (Lambda, DynamoDB, SQS, SNS, CloudWatch), CI/CD
- **Testing & Data:** Cypress, UiPath, PostgreSQL, MongoDB

AWARDS

- Fulbright ETA Semi-Finalist | HackTheHeights: 1st Place (2024), Best Use of Auth0, Runner-Up (2025)
